

## Current Applications

- T-Logs
- Individual Service Plan
- Behavior Tracking
- Secure Communications
- Management Summary
- Health Tracking
- Individual Data Form
- Emergency Data Form
- Incident Report
- Medication Error Report
- Witness Report

## New additions in release 6.0

- General Event Report
- CaseLoad
- Calendar
- Notification
- Blood Glucose
- Medication Tracking
- Lab Report

## Behavior Tracking in Therap 6.0

- Record Frequently Occurring Behaviors
  - Include more details of the behavior plan
  - Include more details of the behavior plan

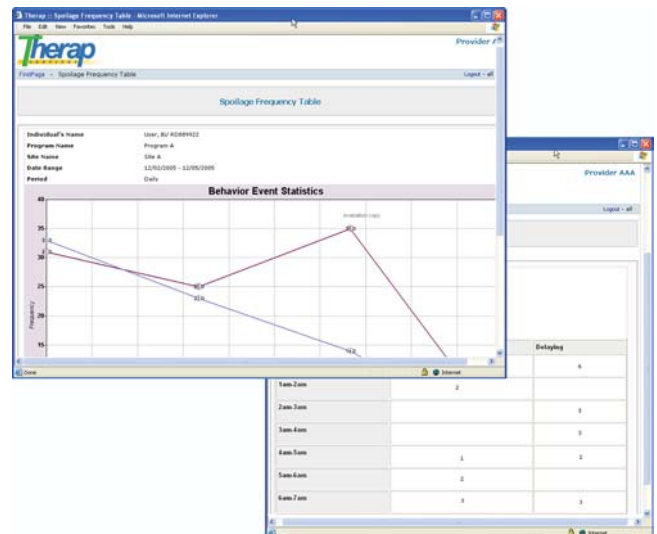

There are some behavior events that can occur many times during the day. While the existing Therap Behavior Event Record application proved to be an efficient tool for recording behavior events which occur less frequently, it was not so easy to use for more frequent behaviors.

We are happy to announce that in Therap 6.0, soon to be released, we have incorporated the Interval Data feature to the Behavior Tracking application.

The Interval Data option displays the span of a day as a collection of 24 hour slots. Recording target behaviors is as easy as selecting the appropriate time slot of a day and entering the number of times the behavior took place.

The efficient reporting options of the application let you compile recorded data into easy to understand tables and graphs. The tables can be exported to Excel for further analysis. These options can help behavioral specialists in analyzing an individual's behavior as well as working on related interventions.

We have also added the capability to upload a full Behavior Plan as a word document so that it is available to staff. The standard Behavior Event Record has also been enhanced so that by clicking on the name of a target behavior or intervention will show a detailed description for that individual.

Interval Spoilage Reports

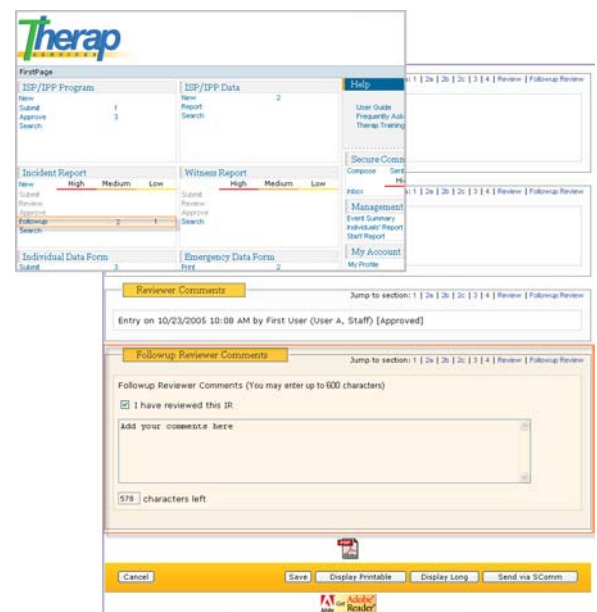

## IR Follow up in Therap 5.2.4

The 5.2.4 version of Therap Services has been recently released online. One of the major enhancements made in this release is the IR Follow up Review feature of the Incident Report application.

Users with the proper authorization are now able to add follow up review comments to approved incident reports. After being approved, incident reports are kept on the users' follow up list for 15 days within which period they can review these reports and comment on them.

This option is going to be extended to the new GER application, to be released with Therap 6.0.

The other enhancements in this release include addition of new events to the Activity Tracking module. All operations on Medication Error Reports including submission, approval and views and all operations on Individual Data Forms including submission, approval, updates and views are now going to be listed on the Activity Tracking list.

IR Follow up

## Application Focus

### T-Logs in 6.0

T-Logs, a smaller but powerful Therap application has always been one of the most popular. If you liked it before, you will love it in 6.0!

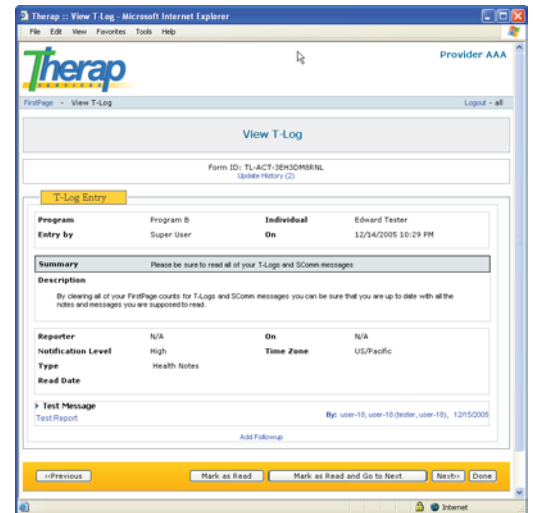

It is now possible to add follow up reports to T-Logs. This has been implemented without hampering the simplicity of the application. To enter a follow up T-Log, all one has to do is click on a 'Follow up' link.

If you feel the need to attach a file (such as Word or Excel) to your T-Log report, just go on ahead and do so. The application lets you attach photos up to 500 KB.

Reading T-Logs has never been simpler! In the morning you can just lean back on your chair and start with the first T-Log on your list. You don't have to go back to the list to get the next T-Log; just keep on clicking on the 'Mark as read and move to next' button at the bottom of T-Logs. You will be done with them in no time!

That's not all! If you want to find out who else knows about the information in a particular T-Log, you can easily do that by clicking on the Read Status link on FirstPage.

If you liked T-Logs before you will love them now. You do not have to wait very long. Just wait till 2006.0.

T-log

#### Q: What is a "Custom Group" in SComm 6.0?

A: A "Custom User Group" is a list of users that you define for yourself. In the 6.0 version of the Therap system, it is possible to create Custom User Groups to send SComm messages to. A message sent to a Custom User Group will be received by all users included in that group. It is very easy to create and manage custom user groups while using the Therap Secure Communications application.

Often times you come across situations when you need to inform your colleagues of events that have happened or important information that you have come across. Sometimes this happens quite frequently and you need to send similar information and reports to the same set of people all the time.

With the Custom User Group option, you don't need to select these people from the program and/or user list each time you have to send out an SComm message. All you have to do is send the message to the Custom User Group.

The application is an intuitive one. If some of the people in a Custom User Group should not be allowed to see the contents of a particular message, it eliminates those users from the recipient list automatically.

## Training Classes and Live Chat Support

### Learn to get the best out of Therap

Want to know more about using the Therap applications? You and any of your staff can join Therap's live online training. All you need is a high speed internet connection and a telephone. You can either join in individually or use a speakerphone and projector to have a whole group of staff trained at once.

Sign up for our free training sessions at [www.TherapServices.net/training](http://www.TherapServices.net/training). You will then be sent instructions including a website address to log onto and a phone number to call at the time of the class. Contact us at [www.TherapServices.net](http://www.TherapServices.net) and let us know when is the best time to hold training classes for you and your staff. Is it at an afternoon shift change? Is it at night? We know that you run a 24 hour operation and we want to work on your schedule.

These classes are available free of charge. All our existing and potential users are invited to join.

In addition to the online training classes, we have recently initiated Live Chat Support for immediate to provide immediate solutions to your problems. If you feel that you can not wait for a training class, look for the  button on [www.TherapServices.net](http://www.TherapServices.net). Like the online training sessions, live chat support is provided free of charges.

For more information please call us at (203) 596 7553.

### Upcoming 6.0 Training Classes

Date	Time	Class
January 4, 2006	4 pm EDT	Therap 6.0: Introduction to GER
January 9, 2006	2 pm EDT	Therap 6.0: What's New in Therap 6.0?
January 12, 2006	9 pm EDT	Therap 6.0: CaseLoads and User Privilege
January 17, 2006	9 am EDT	Therap 6.0: Introduction to GER
January 31, 2006	10 pm EDT	Therap 6.0: What's New in Therap 6.0?
