

# Therap for Day Habilitation

All the same tools that are available to Residential Programs are available to Day supports allowing for full documentation of all the services that are provided and the accompanying supports.

Customizable data collection allows staff to document services provided and goals worked on quickly, easily, and accurately using an electronic system that meets OPWDD's, OMIG's, and CMS's requirements for documentation. Because Therap is fully integrated with mobile web devices (all you need to be able to do is run a standard web browser), data can be collected wherever the service is provided.

By using Therap's Billing Support applications, Day Service providers can keep track of exact hours of service that are provided. The attendance forms are filled out onsite by direct support staff and can be made instantly available to the appropriate staff throughout the agency so that review and approval does not have to wait until the end of the month.

Because staff are also documenting the services that are provided in Therap, it is easier to ensure that the appropriate number of services have been documented for the hours of service provided.

Therap excels when an agency provides both Residential and Day services to an individual. Staff will almost immediately notice that the lack of communication between Residential and Day supports that they always complained about has disappeared without having to rely on clumsy (and often undignified and unreliable) communication books.

Medical or behavioral issues that are recorded at home or at work can now be shared in an efficient, secure, and HIPAA compliant way with the other supports involved in an individual's life.
